

KOI CARE

**Mediclay - Montmorillonite
Revitaliser Clay**

Pure high grade ultra fine powdered montmorillonite revitaliser clay.

Mediclay controls waste build up of bacteria and algae and pollutants in favour of nitrifiers.

The negative electrostatic charge on the particles of powder attract the positively charged particles of algae and other suspended matter in the water forming larger clumps which are taken away by the filter.

The water becomes crystal clear.

Removal of suspended debris and algae improves the health and appetite of the fish in the pond.

Dosage:

As a general maintenance dose:

Add 50 ml powder to 1980 gallons (9000 litres) of pond water every day.

If fish are showing signs of poor health or damage:

Add 100-150 ml of powder to 1980 gallons (9000) litres of pond water every day until improvement is seen.
